Codeforces Online Judge Guide

We will discuss in this lecture the following topics

- 1- Codeforces Online Judge
- 2- How to Create an Account
- 3- How to Solve a Problem
- 4- How to Learn from Other Solutions
- 5- How to Compete in Contest
- 6- How to Learn from Contest Tutorial

3

Section 2: How to Create an Account

Section 3: How to Solve a Problem

Section 4: How to Learn from Other Solutions

Section 5: How to Compete in Contest

Section 6: How to Learn from Contest Tutorial

Codeforces Online Judge

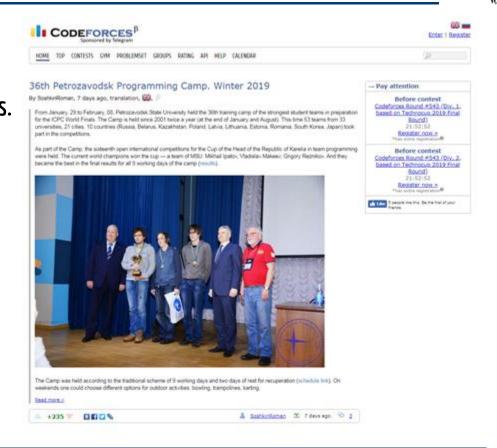

Codeforces is a website that hosts competitive programming contests. It is maintained by a group of competitive programmers from ITMO University led by Mikhail Mirzayanov.

Forethought Future Cup — Final Round

By Lewin, 3 days ago, 38,

Hello again Codeforces!

The Forethought Future Cup Final round will start on May 4th, 10:05am PDT. This round will be rated for everyone. There will be three separate rounds, one for onsite contestants, one for div1, and one for div2. Onsite and div1 will have the same problems. Each round will have 6 problems and be 2 hours long.

Here is a table of the onsite contestants.

scott_wu	neal	ACRush	Fdg	Ra16bit
Kenny_HORROR	liymbear	II931110	xiaowuc1	Suzukaze
yzyz	stevenkplus	pmnox	OpalDshawn	NEU20133823

Codeforces Round #615 (Div. 3) Editorial

By vovuh, history, 2 days ago, 38, @

Thanks to Rox and overrated for help with problem ideas and preparation!

1294A - Collecting Coins

Idea: MikeMirzavanov

Tutorial

1294A - Collecting Coins

Suppose $a \le b \le c$. If it isn't true then let's rearrange our variables. Then we need at least 2c - b - a coins to make a, b and cequal. So if n < 2c - b - a then the answer is "NO". Otherwise, the answer if "YES" if the number n - (2c - b - a) is divisible by This is true because after making a, b and c equal we need to distribute all remaining candies between three sisters.

Solution

1294B - Collecting Packages

Idea: MikeMirzayanov

Tutorial

1294B - Collecting Packages

It is obvious that if there is a pair of points (x_i, y_i) and (x_i, y_i) such that $x_i < x_i$ and $y_i > y_i$ then the answer is "NO". It means that if the answer is "YES" then there is some ordering of points such that $x_{i_1} \leq x_{i_2} \leq \cdots \leq x_{i_n}$ and $y_{i_1} \leq y_{i_2} \leq \cdots \leq y_{i_n}$ because we can only move right or up. But what is this ordering? it is just sorted order of points (firstly by x_i then by y_i).

So we can sort all points, check if this ordering is valid and traverse among all these points. For each k from 2 to n firstly do $x_{i_k} - x_{i_k}$, moves to the right then do $y_{i_k} - y_{i_k}$, moves to the up (because this order minimizing the answer lexicographically).

Time complexity: $O(n \log n)$ or $O(n^2)$.
